

Independent Review Panel Members

The Independent Review Panel consists of 9 internationally renowned scientists and engineers who together cover the breadth of relevant issues needed to ensure a thorough evaluation of the DRMS effort. The Panel members were selected expressly for their expertise and reputation in environmental, civil, hydraulic, and geotechnical (earthquake) engineering; hydrology, geomorphology, coastal hydrodynamics, and atmospheric science; ecology; risk and decision analysis; economics; infrastructure analysis; and engineering management. The Panel was formed in the context of the CALFED ISB's normal concerns for conflict of interest and bias to ensure a balanced and objective review.

The Panel is chaired by Dr. Johnnie Moore and consists of the following experts:

Rich Adams, Ph.D., Oregon State University, Corvallis, OR
