

Charge to EWA Review Panel regarding Resources Agency Action Matrix

1. Evaluate the technical assumptions and conceptual models underlying proposed matrix actions including action triggers, signal-to-noise ratios for response variables, measurement of response variables, and additional proposed field sampling.
2. Evaluate response time for detecting effects of proposed actions identified in the matrix.
3. Provide input on response variables and the relationship between multiple year responses to single- or multiple-year actions.
4. Provide independent perspective regarding characterization of scientific uncertainty in proposed actions and responses.
5. Evaluate potential contribution of proposed actions and subsequent measurements to improving estuary-wide knowledge base regarding declining pelagic species.
